Steen Eiler Rasmussen

The Tao of Architecture Amos Ih Tiao Chang, 1981-07-21 In a contemplative essay that develops a parallel between void, space, time, and the science of vision in Laotzu's philosophy and in modern architecture, Amos Ih Tiao Chang reveals the vitality of intangible, or negative, elements. He writes that these qualities make architectonic forms come alive, become human, naturally harmonize with one another, and enable us to experience them with human sensibility. The author expands Frank Lloyd Wright's thoughts on the affinity between Laotzu's philosophy and modern Western architecture by discussing Natural Life-Movement in Architectonic Vision, Variability and Complement, Balance and Equilibrium, and Individuality and Unity. He accompanies his text with architectural drawings and four Chinese paintings.

The Tao of Microservices Richard Rodger, 2017-12-11 Summary The Tao of Microservices guides you on the path to understanding how to apply microservice architectures to your own real-world projects. This high-level book offers a conceptual view of microservice design, along with core concepts and their application. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the Technology An application, even a complex one, can be designed as a system of independent components, each of which handles a single responsibility. Individual microservices are easy for small teams without extensive knowledge of the entire system design to build and maintain. Microservice applications rely on modern patterns like asynchronous, message-based communication, and they can be optimized to work well in cloud and container-centric environments. About the Book The Tao of Microservices guides you on the path to understanding and building microservices. Based on the invaluable experience of microservices guru Richard Rodger, this book exposes the thinking behind microservice designs. You'll master individual concepts like asynchronous messaging, service APIs, and encapsulation as you learn to apply microservices architecture to real-world projects. Along the way, you'll dig deep into detailed case studies with source code and documentation and explore best practices for team development, planning for change, and tool choice. What's Inside Principles of the microservice architecture Breaking down real-world case studies Implementing large-scale systems When not to use microservices About the Reader This book is for developers and architects. Tower to Tower Henriette Steiner, Kristin Veel, 2020-05-12 A cultural history of gigantism in architecture and digital culture, from the Eiffel Tower to the World Trade Center. The gigantic is everywhere, and gigantism is manifest in everything from excessively tall skyscrapers to globe-spanning digital networks. In this book, Henriette Steiner and Kristin Veel map and critique the trajectory of gigantism in architecture and digital culture—the convergence of tall buildings and networked infrastructures—from the Eiffel Tower to One World Trade Center. They show how these two forms of gigantism intersect in the figure of the skyscraper with a transmitting antenna on its roof, a gigantic building that is also a nodal point in a gigantic digital infrastructure. Steiner and Veel focus on two paradigmatic tower sites: the Eiffel Tower and the Twin Towers of the destroyed World Trade Center (as well as their replacement, the One World Trade Center tower). They consider, among other things, philosophical interpretations of the Eiffel Tower; the design and destruction of the Twin Towers; the architectural debates surrounding the erection of One World Trade Center on the Ground Zero site; and such recent examples of gigantism across architecture and digital culture as Rem Koolhaas's headquarters for China Central TV and the phenomenon of the “tech giant.” Examining the cultural, architectural, and media history of these towers, they analyze the changing conceptions of the gigantism that they represent, not just as physical structures but as sites for the projection of cultural ideas and ideals.

Lao Tzu: Tao Te Ching Laozi, Ursula K. Le Guin, 2009 Ursula K. Le Guin, a student of the Tao Te Ching for more than fifty years, offers her own thoughtful rendering of the Taoist scripture. She has consulted the literal translations and worked with the scholar J. P. Seaton to develop a version that lets the ancient text speak in a fresh way to modern people, while remaining faithful to the original Chinese. This rendition reveals the Tao Te Ching's immediate relevance and power, its depth and refreshing humor, illustrating better than ever before why it has been so loved for more than 2,500 years. Included are Le Guin's own personal commentary and notes along with two audio CDs of the text read by the author, with original music composed and performed by Todd Barton.--Publisher's website.

What If ...? Chee Pearlman, 2014 Widely admired for his sophistication, creativity and exuberance, David Rockwell is one of the leading architects, interiors architects and set designers working today. For over 30 years, he has explored his desire

to imagine new worlds, to tell stories and to engage with others. This interest is rooted in his sense of play and possibility--an endless curiosity that continually drives him to ask, What if? What if you could step inside a crystal goblet? What if your environment transformed with every step? What if a restaurant could vanish at a moment's notice? What if your ultimate escapist fantasy was real? What If...' presents a wide array of Rockwell's brilliant explorations of the rich intersection between architecture and theater. Through immersive imagery and behind-the-scenes details, Rockwell introduces readers to 35 projects, from initial driving idea through physical realization. Works include the famed Nobu Fifty Seven and the newcomer TAO Downtown in New York, the W Paris Op ra, the West Lobby at The Cosmopolitan in Las Vegas and the newly opened TED Theater in Vancouver; set designs for the Academy Awards, Kinky Boots and Hairspray; the Hall of Fragments at the 2008 Venice Architecture Biennale and Jamie Oliver's traveling teaching kitchen, the Food Revolution truck. Engaging texts by Tony Award-winning playwright and screenplay writer John Guare, Tony Award-winning director and producer Jack O'Brien and Pulitzer Prize-winning critic Justin Davidson--written specially for this publication--and a conversation between Rockwell and acclaimed architect Elizabeth Diller round out this spectacular, celebratory volume. David Rockwell (born 1956) is an American architect and designer. He is founder and president of Rockwell Group, an award-winning, cross-disciplinary architecture and design practice based in New York City, with satellite offices in Madrid and Shanghai, that has been named as one of Fast Company's most innovative design practices.

The Theory of Architecture Paul-Alan Johnson, 1994-04-18 The Theory of Architecture Concepts, Themes & Practices Paul-Alan Johnson Although it has long been thought that theory directs architectural practice, no one has explained precisely how the connection between theory and practice is supposed to work. This guide asserts that architectural theory does not direct practice, but is itself a form of reflective practice. Paul-Alan Johnson cuts through the jargon and mystery of architectural theory to clarify how it relates to actual applications in the field. He also reveals the connections between new and old ideas to enhance the reader's powers of critical evaluation. Nearly 100 major concepts, themes, and practices of architecture--as well as the rhetoric of architects and designers--are presented in an easily accessible format. Throughout, Johnson attempts to reduce each architectural notion into its essential concept. By doing so, he makes theory accessible for everyday professional discussion. Topics are arranged under ten headings: identification, definition, power, attitudes, ethics, order, authority, governance, relationship, and expression. Areas covered under these headings include: * Utopic thought in theories of architecture * Advocacy and citizen participation in architecture * The basis of architectural quality and excellence * The roles of the architect as artist, poet, scientist, and technologist * Ethical obligations of architecture * Rationales for models and methods of design * How authority is determined in architecture * How architects structure their concepts * Conventions of communication within the architectural profession Each section begins by showing the etymology of key terms of the topic discussed, along with a summary history of the topic's use in architecture. Discussions probe the

conceptual and philosophical difficulties of different theories, as well as their potential and limitations in past and present usage. Among the provocative issues discussed in terms of their relationship to architecture are chaos theory, feminism, service to the community, and the use of metaphor. Johnson points out with stunning clarity the intentions as well as the contradictions and inconsistencies of all notions and concepts. All architects and designers, as well as students and teachers in these disciplines, will gain many insights about architectural thought in this groundbreaking text.

A Critical History of Contemporary Architecture Dr Elie G Haddad, Asst Prof David Rifkind, Ms Sarah Deyong, 2014-03-28 This book provides a comprehensive, critical overview of the developments in architecture from 1960 to 2010. The first section provides a presentation of major movements in architecture after 1960, and the second, a geographic survey that covers a wide range of territories around the world. This book not only reflects the different perspectives of its various authors, but also charts a middle course between the 'aesthetic' histories that examine architecture solely in terms of its formal aspects, and the more 'ideological' histories that subject it to a critique that often skirts the discussion of its formal aspects.

Beauty, Neuroscience & Architecture Donald H. Ruggles, 2017 For centuries, men and women have sought to express beauty in architecture and art. But, it is only recently that neuroscience has helped determine how and why beauty plays such an important role in our lives. Founded on a series of lectures architect Donald H. Ruggles has given over the past ten years, *Beauty, Neuroscience and Architecture: Timeless Patterns and Their Impact on Our Well-Being* postulates that beauty can and does make a vital difference in our lives, including improving many aspects of our health. In this volume, Ruggles suggests that a new, urgent effort is needed to refocus the direction of architecture and art to include the quality of beauty as a fundamental, overarching theme in two of humanity's most important fields of endeavor--the built and artistic environments.--Provided by the publisher.

Experiencing Architecture, second edition Steen Eiler Rasmussen, 1964-03-15 A classic examination of superb design through the centuries. Widely regarded as a classic in the field, *Experiencing Architecture* explores the history and promise of good design. Generously illustrated with historical examples of designing excellence—ranging from teacups, riding boots, and golf balls to the villas of Palladio and the fish-feeding pavilion of Beijing's Winter Palace—Rasmussen's accessible guide invites us to appreciate architecture not only as a profession, but as an art that shapes everyday experience. In the past, Rasmussen argues, architecture was not just an individual pursuit, but a community undertaking. Dwellings were built with a natural feeling for place, materials and use, resulting in “a remarkably suitable comeliness.” While we cannot return to a former age, Rasmussen notes, we can still design spaces that are beautiful and useful by seeking to understand architecture as an art form that must be experienced. An understanding of good design comes not only from one's professional experience of architecture as an abstract, individual pursuit, but also from one's shared, everyday experience of architecture in real

time—its particular use of light, color, shape, scale, texture, rhythm and sound. Experiencing Architecture reminds us of what good architectural design has accomplished over time, what it can accomplish still, and why it is worth pursuing. Wide-ranging and approachable, it is for anyone who has ever wondered “what instrument the architect plays on.”

The Art of Architectural Drawing Thomas Wells Schaller, 1997-03-18 Lavishly illustrated, this book thoughtfully presents and discusses architectural images which both derive from and inspire the act of building. Beautiful illustrations fill the pages, paying tribute to the process of image-making as an exercise of the imagination. Also covered are techniques for composing architectural images, including how to employ the best media and graphic devices, and more. 157 b&w illus., 50 color illus.

Companion to Contemporary Architectural Thought Ben Farmer, Dr Hentie J Louw, Hentie Louw, Adrian Napper, 2003-09-02 Architecture has attracted increasing worldwide attention in recent years, not only because of its cultural significance but also because of concern over the performance and resource implications of buildings. 101 in-depth articles by international scholars and practitioners bring the subject into focus by examining issues from various viewpoints. Please contact your representative for a leaflet detailing full contents and contributors. It also includes sample pages and several illustrations from the book.

Frank Lloyd Wright and Japan Kevin Nute, 2000 Looks at Wright's formal and philosophical debt to Japanese art and architecture. Eight areas of influence are examined in detail, from Japanese prints to specific individuals and publications, and are illustrated with text and drawn analyses.

The A to Z of Taoism Julian F. Pas, 2006-01-13 Taoism, the set of philosophical teachings and religious practices rooted in the understanding of the Chinese character Tao, or The Way, was founded by the Chinese philosopher Laozi in the 6th Century BCE, whose work, the Tao Te Ching (The Book of the Way and its Virtue) laid the philosophical foundation for the religion's beliefs. This volume starts, as it should, with a detailed chronology of Taoism and its relationship both to China and other teachings. The introduction inserts it further in this basic context. Then the dictionary section, consisting of several hundred cross-referenced entries, provides a more detailed treatment of significant persons, nonpersons (gods and demons), concepts, practices, rituals, scriptures, and schools. The bibliography suggests further reading.

A Visual Dictionary of Architecture Francis D. K. Ching, 2011-12-30 The classic, bestselling reference on architecture now revised and expanded! An essential one-volume reference of architectural topics using Francis D.K. Ching's signature presentation. It is the only dictionary that provides concise, accurate definitions illustrated with finely detailed, hand-rendered drawings. From Arch to Wood, every concept, technology, material and detail important to architects and designers are presented in Ching's unique style. Combining text and drawing, each term is given a minimum double-page spread on

large format trim size, so that the term can be comprehensively explored, graphically showing relations between concepts and sub-terms. A comprehensive index permits the reader to locate any important word in the text. This long-awaited revision brings the latest concepts and technology of 21st century architecture, design and construction to this classic reference work. It is sure to be by the side of and used by any serious architect or designer, students of architecture, interior designers, and those in construction.

Architectural Humanities in Progress Bagoes Wiryomartono, 2022-02-02 This monograph brings three branches of philosophy together: epistemology, ethics and aesthetics. It assesses the built environment as a case study from a phenomenological perspective. Under the notion of phenomenology, this study understands the built environment as the hermeneutical phenomenon of being in the life-world that is experienced by people within the socio-cultural and historical context of habitation. Hermeneutically, the built environment as a phenomenon is contextually interwoven with other phenomena within the socio-cultural, historical, and environmental network. Phenomenologically speaking, the task of the study is to excavate, listen to, unfold, divulge, and reconstruct the socio-culturally, environmentally, and historically constructed relationship between people and their built environment that build, develop, and elaborate the system of knowledge, ethics, and aesthetics. By and large, its nature and findings are theoretical and interdisciplinary, so it will be of interest not only for philosophers, but also to scholars studying urban development and anthropology.
